International Scientific Journal

This is an international open-access, peer-reviewed electronic journal founded by the T.H. Shevchenko National University “Chernihiv Colehium”.

The Journal publishes original research papers, review articles and short communication papers in the fields of Biological Sciences, Health, Food and Chemical Technologies.

Responsibility for facts, quotations, private names, enterprises and organizations titles, geographical locations etc. to be barred by the authors.

The Editorial Office and Board do not always share the views and thoughts expressed in the articles published.

Foreword

from the Editor-in-Chief

There is no need to convince readers of the first our issue that the natural environment is created and maintained by living organisms, the totality of which is biota. The study of the diversity of living, which began since the day of Hippocrates, Aristotle, and Theophrastus, has not lost its relevance in the modern scientific world. In the 21st century, the search for scientists in quite diverse – from inventory species diversity of ecosystems to the study of adaptation mechanisms of organisms and biota metagenomic studies.

The biota, for which there are no administrative boundaries, compensates for any environmental disturbances that do not exceed the threshold of destruction of the biota itself. This implies the need for international cooperation in various fields of living research. In order to bring together scholars who study different aspects of biotic potential of the environment and its conservation, we are launching the international scientific journal *Biota. Human. Technology*. We are the part of the Editorial Board of the Journal attracted scientists from different countries, who carry out scientific research in various fields of Biology, Ecology, Health, Food and Chemical Technologies.

We expect from our potential authors original articles dedicated to the results of diverse studies of living matter at different levels of the organization – from molecular to biosphere. We look forward to articles on the problems of the functioning of biological systems (including the human body), biodiversity protection of the environment, as well as healthy human nutrition and technological processes.

The BHT Journal pages always have a place to cover the results of scientific discussions which were made by researchers from all the world.

Respectfully Yours,
Prof. O. Lukash
