## UDC 004.231.2

This issue presents the results of research that are run by teachers, doctoral students, graduate students and high school, as well as members of research and design organizations and employees of industrial enterprises on various aspects of automated electromechanical systems.

Describe new methods of analysis and synthesis of electromechanical systems, development of new modern industrial drives and their components. Considerable attention is paid to energy saving by means of automated electromotor-drive.

The journal is designed for engineers and scientists involved in the research, design and operation of automated electromechanical systems and their components, as well as teachers and students in higher education in related disciplines.
